Contents

Preface: Applied and Computational Historical Astronomy <i>Gudrun Wolfschmidt (Hamburg)</i>	11
1 Introduction to Applied Historical Astronomy <i>Susanne M. Hoffmann (Jena)</i>	13
1.1 Introduction to Applied Historical Astronomy	14
1.1.1 Usage of historical data	14
1.1.2 The aspect of application	16
1.1.3 Exploring stellar evolution: The needs of astrophysics	17
1.1.3.1 New stars – an historical example	17
1.1.3.2 Current research on novae	18
1.1.4 Successful stories	19
1.1.4.1 Supernovae	19
1.1.4.2 Novae	20
1.2 Opening of the conference contributions	20
1.3 Bibliography	21
TECHNICAL	25
2 Exploring Skies Remote in Time and Culture with <i>Stellarium</i> <i>Georg Zotti (Vienna, Austria)</i>	27
2.1 Introduction	27
2.2 Virtual Archaeoastronomy	29
2.2.1 Why simulation is necessary	30
2.3 <i>Stellarium</i>	31
2.3.1 <i>Stellarium</i> for Virtual Archaeoastronomy	32
2.3.2 Skycultures	33
2.3.3 Calendars	40
2.3.4 Simulation of transient phenomena	41
2.3.5 Interfacing with other programs	43
2.4 Conclusion	43
2.5 Bibliography	44

3 (Semi-)Manual Data-Mining and -Processing <i>Karsten Markus-Schnabel (Berlin)</i>	49
3.1 Bibliography	50
GEOMETRY AND ARCHITECTURE	50
4 Astronomical orientation of Apedemak temples, mortuary chapels, and tumuli of the Meroitic period <i>Tim Karberg (Münster)</i>	53
4.1 Bibliography	53
5 Kepler's Astronomia Nova – a challenge for computational history of science <i>Gerd Graßhoff (Berlin) & Mohammad Yeghaneh Abkenar (Berlin)</i>	55
5.1 Bibliography	55
HISTORICAL STAR CATALOGUES	55
6 Pre-telescopic star catalogues – Accuracy in magnitudes and positions <i>Philipp Protte (Jena) & Susanne M. Hoffmann (Jena)</i>	57
6.1 Introduction	58
6.1.1 Dependencies and open questions	59
6.1.2 Previous works on historical magnitudes	60
6.2 On the original catalogues	61
6.3 Analysis of the magnitudes	63
6.3.1 Conversion of the magnitude scales	63
6.3.2 Analysis of the magnitude errors	65
6.3.2.1 Variance and covariance	65
6.3.2.2 Dependence on the colour index	68
6.3.2.3 Extinction features	70
6.3.2.4 Star maps and background brightness	71
6.4 Conclusions from the magnitude analysis	75
6.4.1 Statistical significance	76
6.4.2 Final Remarks on the accuracy of pre-telescopic magnitudes	76
6.5 Modern attempts of magnitude estimation	78
6.5.1 Neutral density filters	78
6.5.2 A citizen science App	81
6.6 Reconstruction of Ptolemy's Armillary sphere	81
6.7 Bibliography	82

7	How visible are celestial objects?	
	<i>Victor Reijs (Lochem, The Netherlands)</i>	89
7.1	Introduction	90
7.2	Definitions used to define the visibility of celestial objects	90
7.2.1	Some angle definitions	90
7.2.2	Visibility during full darkness	91
7.2.3	Heliacal events	92
	7.2.3.1 Stars and outer planets	92
	7.2.3.1.1 Star types	93
	7.2.3.2 Inner planets	94
	7.2.3.3 The Moon	94
	7.2.3.4 A summary of apparent heliacal events	94
7.3	Visibility models	96
7.3.1	Different types of visibility models	96
	7.3.1.1 Observational models	96
	7.3.1.2 Mathematical models	96
	7.3.1.3 Combined models	96
7.3.2	Schaefer's model	97
	7.3.2.1 Parameters in Schaefer's model	97
	7.3.2.2 Sensitivity analysis using Schaefer's model	97
7.3.3	Sensitivity of observational models	100
7.4	Comparing with observations and other models	100
7.4.1	Schaefer's combined model and Kolev's observations	100
7.4.2	Schaefer's combined model and Schoch's observational model	101
7.4.3	Schaefer's and de Jong's combined model	102
7.5	Analysing more visibility aspects using a combined model	102
7.5.1	Day and night vision	103
7.5.2	Star type determination	103
7.5.3	Visibility of First Crescent	104
7.5.4	Visibility of Venus during a year	105
7.5.5	Date distribution of Venus' heliacal rise	106
7.5.6	Are observations actual observations?	107
7.6	Concluding remarks	108
7.7	Bibliography	109
8	The star catalog of Wilhelm IV, Landgraf von Hessen-Kassel	
	<i>Andreas Schrimpf (Marburg) & Frank Verbunt (Nijmegen, The Netherlands)</i>	113
8.1	Introduction	114
8.2	Astronomy at Kassel	115
8.3	The star catalogue of Wilhelm IV	117

8.4	Accuracy of the measurements	121
8.5	Accuracy of the computations	123
8.6	Accuracy of the Catalogue	125
8.7	Conclusions and outlook	127
8.8	Acknowledgement	128
8.9	Appendix	128
8.10	Bibliography	128
INDIVIDUAL STARS		129
9	Historical Sunspot Records....	
	<i>José M. Vaquero (Mérida, Badajoz, Spain)</i>	131
9.1	Bibliography	131
10	Mira, Eta Carinae and Algol – Variable Stars as Milestones in the History of Astronomy and Astrophysics	
	<i>Björn Kunzmann (Hamburg)</i>	133
10.1	Bibliography	134
11	Discovery of an emission nebula in the Galactic globular cluster M22	
	<i>Fabian Göttgens (Göttingen), Peter M. Weibacher (Potsdam), Martin M. Roth (Potsdam), Stefan Dreizler (Göttingen) et al.</i>	137
11.1	Bibliography	137
12	Review on the search for historical novae and several byproducts	
	<i>Susanne M. Hoffmann (Jena) & Nikolaus Vogt (Valparaíso, Chile)</i>	139
12.1	Long-term studies in astrophysics	140
12.2	Suggestions of historical novae and supernovae	141
12.2.1	Supernovae	141
12.2.2	Several questions occurring	143
12.2.3	Novae	143
12.3	How many novae do we expect?	145
12.4	How can we judge the likelihood that a record matches a particular star?	146
12.5	A new computational method	148
12.5.1	Test data	152
12.5.2	Expected Results and Uncertainties	153
12.5.3	Yearly change in the dataset	153
12.6	Results from applying our method	154
12.6.1	Successful findings	154
12.6.2	Are there possibly recurrent novae on the timescale of centuries?	155

12.6.3	Does Shara's CV+shell pair in Sco really match the event 1437?	156
12.6.4	There are novae among the three suggested supernovae in the 4 th century!	156
12.6.5	The event +483 east of Shen	157
12.6.6	The single event in Niandao: 1404 or 1408	157
12.6.7	The single event 1181 in Huagai, LM Kui	161
12.6.8	Doubtful records analysed	163
12.6.8.1	Three novae after comet 837 CE	163
12.6.8.1.1	Event 837(c)	164
12.6.8.1.2	Event 837(b)	165
12.6.8.1.3	Event 837(a)	165
12.6.8.1.4	Results on 837	166
12.6.8.2	Eratosthenes' additional star	167
12.6.8.3	The record from 396 CE	168
12.6.8.4	The record from 437 CE	169
12.6.8.5	The records from 667 and 668	172
12.6.8.6	The record from 891 CE	172
12.6.8.7	The records from 1592 CE	173
12.6.9	Open questions	175
12.6.9.1	The single event -76 in Zigong	175
12.6.9.2	The single event -46 east of Juanshe, LM Mao	175
12.6.9.3	The single event +107 in Hu, LM Dongjing	176
12.6.9.4	The event 1073 or '74 south of Dongbi	177
12.6.9.5	The single event 1113 in Yingshi	177
12.7	Summary	178
12.7.1	An addition to the historical catalogue	179
12.7.2	News for the interpretation of text	182
12.7.3	News for astrophysics	183
12.8	Bibliography	187
13	Frequently Asked Questions on our Method	
	<i>Susanne M. Hoffmann (Jena)</i>	195
13.1	Can we exclude comets by selection criteria?	196
13.2	Why do we consider 'fuzzy stars' and 'broom stars'?	196
13.3	Why we neglect terminology	198
13.3.1	The noun	198
13.3.2	The verb	201
13.3.3	Two examples of misleading text	201
13.3.4	Conclusion on terminology.	202
13.4	On which identification can we rely for the search fields?	203

13.5	What counterparts do we search for novae?	203
13.6	Why do we not consider the distances?	204
13.7	What types of objects do we search for the thesis and antithesis?	205
13.8	Why is the resulting table of targets not the solution?	206
13.8.1	Uncertainty 1: Position and Computing	206
13.8.2	Uncertainty 2: Corrupted text	207
13.8.3	Uncertainty 3: Further possibilities for counterparts	207
13.8.4	Why the research should go on: Uncertainty principle	208
13.9	What are the error bars of the position?	208
13.10	What is the outcome of all this?	208
13.11	Why the Star of Bethlehem is irrelevant here	209
13.12	What were the filter criteria for modern counterparts?	210
13.13	Bibliography	210
14	Taharqa's Resurrection Machine: The Solar Alignment of Jebel Barkal and his Pyramid at Nuri <i>Tim Kendall (Boston, USA) & E. C. Krupp (Los Angeles, USA)</i>	215
14.1	Bibliography	216
	Authors	219
	Nuncius Hamburgensis	225
	Index	233
